Engineering)

Abstract:

This paper mainly focuses on Ancient and Modern Cosmology with true Cosmography design of universe with Sacred Geometry called Cosmometry. The ancient Cosmology view of all world religions has mentioned that the Earth is Flat and Stationery. This beautiful universe is daily rotating on the Flat Earth, which is the ultimate reality. Today there is a great awareness among people about the Flat Earth concept because of information technological era. In this paper the real geometry of the universe is well presented by which all the present day problems of the Cosmology and Astro-Physics through Gödel Universe Metric can be solved. Also the relation between energy of Jiva (i.e. Soul) of human being with universe geometry and how Jiva's consciousness affects on the universe geometry, the 5 elements of the nature, solar system, planets, stars and galaxies through Aether energy is discussed. The aim of this paper is to bring awareness among the scientists about the energy of Jiva of human being, universe real geometry and the role of Pole Star in relation with the upcoming transformation process of the universe which will be the top most event in the history of humanity.

Keywords: *Jiva(Soul), Unified Field, Cosmometry, Sacred Geometry, Aether, Cosmic Cycle*

This Research Paper has been presented at 'International Conference on Science and Jain Philosophy' which was organized by - Indian Institute of Technology and BMIRC on Jan 08- 10, 2016 at Powai Mumbai.

INTRODUCTION:

All around us there is a gigantic and very beautiful universe with tremendous and marvelous planetary system. After seeing this, the human mind is compelled to get into deep introspection of how this universe comes into existence?

To understand the true nature of the universe, it is necessary to find out answers for certain queries such as What is Jiva (i.e. Soul)?, From where Jiva came?, What is the Conscious Unified Field (i.e. Chetana) of the universe?, What is Aether (i.e. Dravya/Quantum Vacuum Energy)?, What is Unified Sacred Geometry of Cosmos (i.e. Cosmometry)?, What is the structure of the Earth and Universe in view of ancient religion's cosmology?, What is secrecy of Cosmic Cycle (i.e. *Kālacakra*)?, etc. In this research paper, it has been tried to give solutions to these unsolved queries and mysteries of the universe with the unification of science and spirituality.

I. Some Important Facts Regarding True Nature of the Universe:

Some of the important facts regarding true nature of the universe are as follows.

A. What is Jiva (i.e. Soul)?

In reality we are not a mortal physical body but a point of metaphysical light energy which is known as **Consciousness Quantum Spiritual Energy (CQSE)** i.e. Jiva or Soul), which is very subtle, immortal, eternal and cannot be seen with the human eyes or by a microscope. When the Soul leaves from a body, it is known as death and when it enters in a new body, it is known as birth. The Soul with the help of 10 dimensional Strings which are connected to all Aethric energy points creates energy in Planck's small space called **Hilbert Space** under **Lagrangian** mechanics and this Aetheric energy gives power to 37 trillion cells of our body with 13 energy centers and

with the help of brain's Hypothalamus, Pituitary, Pineal glands and 100 billion neurons, Soul can control the all the movements of our body.

Soul acts on Brain through Aether medium by creating vibrations in quantum vacuum energy which creates electromagnetic bio-photons through torsion waves, and these acts on microtubules of Brain under mechanism of quantum computing for collapse of quantum wave functions which gives experience to Soul. So our body is like a robot, brain is like supercomputer and soul is like a programmer. All the Aether energy contained in the human body can be extracted by the soul while leaving from the physical body. As per our previous birth Karmic Account (i.e. persons' actions and conduct during successive reincarnations), the power of purity of the soul greatly affects on DNA of new body and accordingly that the structure of our body will be formed. Hence, as per previous birth Karmic Account, structure of our body and birth place will be fixed. When we leave one body, we take another body of human being only and not any animals body as the DNA of both are very different from each other. Soul give program to DNA via morphogenetic field to build organs of body. Also it carry information for next birth of Human body.

According to famous UK physicist Roger Penrose and his fellow scientist Stuart Hameroff, "Human consciousness is not originated from human brain but it is basic vibration frequency of very subtle space which interacts with human brain through quantum gravity." [1] The Soul's subtle Planck geometry is very small and less than 1.616×10^{-35} meter, whose energy waves Planck time is 5.39×10^{-44} second. The neurons in the human brain cells catch this basic frequency and interact with the soul. Shakespeare said that, "This world is a stage and we are all the actors". On this earth, we are like a guest. In reality, we came from the cosmic or soul world (i.e. Anti-matter world) which is beyond this physical world.

B. The Conscious Unified Field of Universe:

To most people, it is obvious that the Universe is an organized unity. Whenever we look, from the innermost recesses of the atom to the far-flung galaxies, we encounter harmony and order of eternal cosmic laws. Today we know this mysterious universe governed by many well defined physical, chemical and biological laws; but there are many other deep and fundamental laws of universe which we don't know, because the knowledge of universe, its structure and operation is like an ocean. That's why Isaac Newton said that "**What we know is the drop, what we don't know is the ocean!**"

Today many physicists and cosmologists around the world are doing the research to find out the ultimate mysteries of universe. In our present state of knowledge nature's varied phenomena required a multiplicity of different descriptions - a theory of gravitation, a theory of electromagnetism and so on. Many theoretical physicists believe, however, that underlying this multiplicity is a unified description of nature i.e. **The Theory of Everything (TOE)** or **The Conscious Unified Field Theory of Universe** from which entire universe is manifesting. Many scientists think that as per Standard Model of Physics, there may be any basic particle of all particles and a super force of all forces.

Dr. John Hagelin a US theoretical Physicist has carried out deep research on this theory with the help of Super String theories and found that such Conscious Unified Field of universe must be in the 10th dimension of the universe with high Quantum Vacuum Energy (Aether) level of 10^{19} GeV with Infinite Silence Field of Pure Consciousness. [2] For this Unified Field the entire universe is manifesting with the help of 5 elements (i.e. Dravya) of nature with their particles and force carriers which are mind blowing. Further all particles and forces of this Unified Field can be represented through Unified Geometry as shown by American theoretical physicist Antony Garrett Lisi, who has proposed a Unified Field Theory based on the E_8 Lie group, combining particle physics with Einstein's theory of gravitation.[3] This theory shows that the universe is running under mechanism of Geometrical pattern of particles and forces at very high energy levels in dance of Creation from Unified Field of universe.

C. Aether Energy- Sixth Element (Dravya) of the Cosmic World

The Nature consists of 5 elements such as earth, water, fire, air and sky. Aether is the sixth element (i.e. Dravya) of the cosmic world which is mixed into all the elements of the nature in different proportions. There are two types of Aether elements one is Golden Luminous and other is Radiant which is present in nature's 5 elements. Aether energy is known as life force or vital force.

The structure of Aether is very much subtle of the value $10^{-35}m$ which is impossible to measure by present set up. The Dark Energy which is being searched by today's scientists is nothing but the Aether element energy. Hence science is considering Aether as an imaginary element which is its biggest mistake. In scientific language, the Aether is known as Quantum Vacuum Energy whose density is $5.16 \times 10^{93} \text{ gm/cm}^3$. If we compress all the planets and galaxies of the universe in 1 cm^3 volume then its density will be $5.16 \times 10^{55} \text{ gm/cm}^3$. It means Aether energy contained in 1 cm^3 volume is more than 10^{38} gm/cm^3 when compared with visible matter of the universe which is tremendously high and very powerful. The Aether energy contained in 1 cm^3 volume can completely vaporize all the sea water present on the earth. There is 99.99% Aether occupied in the universe and the visible matter is only 0.01% which we can see. Aether has interaction with the 5 elements through Unified Geometric Field, hence nature's Mathematics lies in Geometry and not in Algebra.

Aether was discussed in Indian Vedic literature and by Ancient Greece philosophers Socrates and Plato. Old civilizations came to know that the Aether receiving capacity of the earth had got reduced hence they had constructed many sculptures such as Pyramids, Ester Islands, Maya culture pyramids etc. Today, there is a misconception about ancient sculptures that these were constructed by Ancient Aliens but it is not the truth. Because such sculptures were constructed by our old civilizations on the earth's ley line so that Aether energy could be absorbed and fed to the core of the earth. As the time passed, the Aether energy receiving capacity of the earth's core has been continuously reducing due to which the natural disasters on the earth are increasing.

In reality, the thoughts of human souls are creating and disturbing the earth's magnetic field through Aether energy. There is an example of 9/11 terrorist attack on twin towers of world trade center in America. On that day, the scientists have observed the sudden variation in the earth's magnetic field recorded by Global Coherence Network which was created by collective frequency of deep sorrow of human souls got tuned with the natural frequency of the earth. Hence there was Global Resonance takes place which is also known as Schumann Resonance. Famous scientist Nikola Tesla said that "The earth's vibration frequency is in between 6 to 8 Hertz which is equal to our heart's vibrational frequency hence human consciousness greatly affects earth's ecological system." The complete universe works on one Unified Geometric Field which joined all the particles or 5 elements. But the scientists are not accepting unified geometric field due to which they are unable to find out nature's wonderful Theory of Everything.

D. The Unified Sacred Geometry of Cosmos (i.e. Cosmometry)

Our old civilizations had realized that the 5 elements of the physical world such as earth, water, fire, air, and sky which are known as five Platonic geometries are made from Aether Sacred Geometry. We had find out sacred geometry of the 5 elements such as Flower of Life, Vesica Pisces, Metatron's Cube and Tree of Life. These types of symbols were used in art works of all old civilizations. The 7 vowels of music created by this sacred geometry and the resonance frequency of the universe are in the form of sound of "Om". There is a unique geometric structure of these 5 elements among each other with Fibonacci Numbers and Golden Ratio for creation of mater and its forces.

Universe is nothing but Ultimate Sacred Geometry (i.e. Cosmometry) of Conscious Unified Field of Universe from which entire universe is manifested through various fundamental patterns of Energy, Frequency and Vibration. At its foundation, Cosmometry is a study of the fundamental

patterning of cosmic manifestation which is composed of three energetic-synergetic components. [4] These are:

- a. **Vector Tensegrity** - Geometric pattern and structure (crystalline forms)
- b. **Torus Flow Process** - Primary form of energy in motion as a discrete entity (whirlpools)
- c. **Field Patterning** - Standing wave interaction of vector and torus dynamics (water waves)

a. **Vector Tensegrity** - Foundational to the cosmic phenomena we can observe (photonic and atomic radiation) and determine to exist (e.g. dark matter/energy) and directly experience that the Unified Field is of infinite energy and creative potential. Commonly known as the zero-point field or vacuum of space (or called plenum, meaning "fullness"), this is the source state that precedes manifest reality (both physical and metaphysical). This Unified Field has a specific Cosmometry (or geometry) wherein all energetic radiation, gravitation, magnetism, tension, pressure, thought, feeling, etc resolves into a state of perfect and absolute equilibrium - zero differential and fluctuation. The name of this Cosmo-metric pattern is Isotropic Vector Matrix (IVM). Isotropic means "all the same". Vector means "line of energy". Matrix means "pattern of energy lines". It is a pattern of energy lines that are all the same everywhere. Here is an illustration of this matrix (that includes highlighting of two basic geometric forms inherent within it: Cuboctahedron (also called a Vector Equilibrium) and Octahedron. When energy comes into a state of perfect and absolute equilibrium, all differentiation becomes zeroed out, resulting in a Unified Wholeness that is beyond even the concept of unity. Vector Equilibrium has the inherent ability to "collapse" in a spiraling motion And quite remarkably, as it does so it transforms through phases that include symmetrical articulation of the icosahedron, dodecahedron, octahedron, cube and tetrahedron. In other words, the VE inherently has the potential to create all of the platonic solids (Elements / Drvya) in one swift motion from energy of Unified Field of Universe.

The VE is the most basic symmetry of the Isotropic Vector Matrix, and is essentially the focal point of all manifest energy events, be they protons, electrons, crystals, planets, stars, galaxies... This is because every one of these events is the result of an impulse that introduces tension/pressure dynamics (differentials) which collapse the zero-point IVM /VE Cosmometry into a discrete phenomenon with its own unique focal point - the center around which it exists. This center point is the center of the VE. It is the "singularity" that connects the entity to the Unified Field in its zero-phase. Everything is always connected to the Unified Field in its zero-phase, and in this way, everything is always connected to the center of everything else. This is an extreme beauty of Conscious Unified Field of universe who is Gforce of the universe.

b. **Torus Flow Process:-** When energy becomes manifest (collapses out of IVM zero-point equilibrium) it immediately sets up a polarized dynamic, creating the fundamental form of energetic flow called the Torus. Everything, from atomic "particles" to electromagnetic fields, to weather patterns, to trees, to us, to ecosystems, to planets, to stars and galaxies, is toroidal in nature. The Universe is a seamlessly embedded fractalization of torus energy flow. Here is a simple

illustration of a torus as per fig. The characteristics of the torus are of primary importance to our understanding of how healthy and sustainable living systems are formed at all scales of existence.

- It is made from the medium in which it exists
- It is self-generating and self-sustaining
- It exchanges information and resources throughout itself and with the environment in which it exists
- It has a continuous feedback loop and is self-reflexive
- It is both an autonomous entity and integral part of a larger wholeness
- It is centered by a singularity that connects it with the entire Universe

c. **Field Patterning:** - The third primary component of Cosmometry is the patterning of the energy as it manifests in and around all entities – the Field Patterning – and as it seamlessly scales from micro to macro, quantum to galactic, with maximum efficiency and harmony. Again quite remarkably, in exploring this patterning we are able to observe that the most basic aspects of the fractal-holographic nature of the cosmos – the presence of the PHI ratio. It appears that the general manifest field of space-time is fundamentally based upon the phi ratio in its Cosmometry. It is one of nature’s most fundamental scaling ratios, providing the maximum efficiency and balance of energy flow throughout the cosmos. There are four fundamental characteristics of how phi is observed: as Spiral, Quantity, Scale and Angles. The following sections provide a brief introduction to each one with a few examples found in nature.

E. What is the Structure of the Universe?

The famous scientist Nikola Tesla said that **“If you want to understand the Universe, think of Energy, Frequency and Vibration.”** Hence to reveal the secrets of the universe we must have to understand the basic 3 energies, 6 frequencies and 9 vibrations of the universe.

The figure 1 and 2 shows structure of universe as per Jain philosophy and proposed structure of the universe.

Fig. 1 Jain Structure of Universe

Fig. 2 Proposed Structure of Universe

The structure of universe is like a Yogi’s body who is doing Sadhana, in which the Cosmos is the head and all star celestials are part of Cosmic brain, Pole Star is like hypothalamus, White hole is like crown chakra of universe, all planets are body parts like heart, lungs, liver, stomach etc. and Flat Earth is like Yogi’s legs with Earth’s core as Kundalini (i.e. Serpant) power of universe in Muladhar chakra. Beyond this marvelous universe, there is nature’s 6th element as of golden particles known as Golden Luminous Aether energy (Quantum Vacuum Energy) and in science, it is known as antimatter. Yogis called this soul world as Shantidham, Nirvandham, Brahmlok. This

marvelous cosmic world is connected to the physical world through White hole. This White hole is an opening of the cosmic world in which there is power to rotate this universe. This White Hole is the center of gravity of the universe and giving Aether energy to Pole Star whose astral link is with all the stars and galaxies of the universe by which the entire universe rotates continuously in cyclic pattern in the clock wise direction on Flat and Stationary Earth.

The physical world is in 4 dimensions in which objects are 3 dimensions and time is 1 in one dimension and ultimately it is subpart of complete universe. Today scientists know only half portion (i.e. physical world) of the universe and half upper portion (i.e. subtle and cosmic world) is still unknown to them. If we join physical, subtle and cosmic worlds then there is formation of the complete universe, which is present in 10 dimensions and in this topology only we can get perfect equations of the complete universe. Thus, the description of three worlds:-

1. Physical World: - In this world there is existence of human beings, animals and 5 elements of the nature.

2. Subtle World (Devloka): - This region is beyond the sky and one can reach to this region by astral body only.

3. Cosmic World (Aloka):- In this region, there is an existence of all Souls of World in peace and purity. Also there is existence of 6th element i.e. Aether in bulk quantity.

The Present universe is like a Gödel Universe in which each and every particle completes its loop after certain period. The sky is rotating above the earth like Rotating Gödel Universe in which gravity and quantum field are combined in the subtle form and continuously rotating with Gödel Geometric Matrix. The Rotating Gödel Universe is a complete solution to Einstein's field equations. Many unsolved problems regarding physical world such as sun corona, sun neutrino problem, EPR (Einstein Podolsky Rosen) paradox and wave function problem etc can be satisfactorily solved by the cyclic Gödel Universe. If scientists accept the Gödel universe model then many secrets and wonderful geometry of the universe may get revealed.

F. Structure of Earth

In reality, the earth is not round but a flat disc and it is stationary. The concept of flat earth is not new for us and there was an acceptance of it, in astrology of all major religions from 2500 years ago. If we read holy books of all religions like Bible, Quran, Vedic Science and Jain's Agam Sutras, we will find out the structure of universe in Geocentric Model, where Earth is flat, stationary and at the centre of universe. The complete universe is rotating in a clock wise direction through power from white hole like a net cage on the Flat Earth. There are two massive black holes presents below and above the earth, due to which the centre of the core is acting as a bad conductor and splitting the monopole into two parts forming dipoles hence we observed two North Poles on the earth and this fact is unknown to the scientists. Also due to these black holes, all light rays get cyclic path from Sun and Moon. The galaxies, sun, moon etc. are continuously rotating around this stationary earth due to which there is formation of electromagnetic field and it also charges the atmosphere above the earth.

When light rays from Sun and Moon passed through black hole, it becomes curved and come downward in cyclic pattern and try to go back to their origin as per Gödel Geometric Metrics. Due to this the light rays of the sun and moon are falling on the earth in round shape hence the earth appeared to be in a round shape when we see it from the space. We experience day and night, solar and moon eclipses because of curved shape of light rays as shown in figures 3 and 4. This is the wonderful truth behind the amazing mysteries of the Flat Earth. If earth is rotating, the nature might be getting completely destroyed and there will be no existence of life on the earth. Today there is a great awareness among people about the Flat Earth concept because of availability of detailed informative videos and books over the internet. The International Flat Earth society has shown many scientific proofs about Flat and Stationary Earth in the article "200 Proofs - Earth is Not a Spinning Ball" by Mr. Eric Dubay.

Fig.3 Day and Night on Flat Earth

Fig. 4 Solar and Moon eclipses on Flat Earth

The deep space missions on moon were unsuccessful due to heavy radiation in Earth's Van Allen Belt and also because of cyclic curvature topology of space on the earth. The bodies of astronauts of Apollo and Soyuz spacecrafts found dead and twisted when spacecrafts returned to the earth. No human being can go beyond 36000km in space.

The core of the earth is like a heart. At the time of Golden age, the earth's core was Monopole and there was large quantity of Mercury around the core in all sides. The Mercury absorbed the Aether energy and kept the core charged due to which there was generation of the earth's electromagnetic field. In Copper age, earth's core got spilt in two parts (i.e. North and South) Poles and huge quantity of Mercury got converted into Silicon which was spread into the land beyond the South Pole. Now all around the core of the earth, there is Silicon which is acted as a semiconductor due to which it is able to absorb small quantity of Aether energy and it is discharging resulting in the earth's electromagnetic field reduction by which many natural calamities are increasing.

II. Results/Ideas/Thoughts

A. Secrecy of Cosmic Cycle (i.e. Kālacakra)

This mysterious universe is eternal and has no beginning and no end. This universe is nothing but a big cosmic cycle of different ages like Golden, Silver, Copper and Iron ages and each age is of 1250 years duration. The first half cycle is 2500 years which consists of Golden and Silver ages known as Heaven on the earth. In this period of 2500 years, Jiva's and nature were in their highest and purest form of original qualities with full of happiness. There was the existence of the Deity Dynasty religion on the Indian continent only. From Copper age, there were establishment of different religions like Islam, Christian, Buddhist, Jain, Sikhs, Parsi etc. and formation of different continents on the earth. The history and geography of the universe repeats dramatically after each 5000 years period and it is known as Cosmic Time Cycle according to old civilizations.

As the universe consists of energy, then according to first law of thermodynamics the universe can neither be created nor be destroyed, it can only be transformed from one form to another. There are many researches around the world accepting that Big Bang theory of universe and Evolution theory are not correct as per present observation of the universe. Some of scientific evidences of 5000 years period of cosmic cycle are:

1. The full life of earth's magnetic field is 5000 years (ESSA Report)
2. Lead to Uranium conversion takes place in about 5000 years.
3. The universal flood had occurred about the 5000 years ago.

4. According to fossil radioactivity the geological age of the earth is only thousands of years.
5. 300 BC Plato had described about highest civilization i.e **Atlantis** on the earth hence the present history available is only of 2500 years.

B. The Future of Universe:

Today scientists are observing that, the universe seems to be expanding and the galaxies are moving far away from one another. As the Pole Star is moving towards the earth, the sky element is bulging at the centre and hence all the galaxies and stars seem to be expanding which is known by the spectrum of light. Hence, there is a red shift in the light waves. As the purity of Jivas goes on decreasing, the serpent power which was in crown center in Golden and Silver ages moves to third eye center and then to heart center in Copper age, due to which there is a movement of Pole Star towards the earth gradually. Also it's centre point go on changing and now it is inclined at an angle of 23.5° with respect to earth centre point. Crown center of serpent emits blue color light and root center emits red color light due to which the light spectrum from the stars found in red color.

As the speed of motions of the Pole Star is more, at many locations galaxies seem to be pulling from the back side which is known as Dark Flow Problem and today scientists are unaware of this fact. The Pole Star will be the medium to spread Aether energy into the physical world and in future it will come very close to earth. Aether element will be spread into nature's 5 elements; hence there will be complete purification of them. Due to the presence of Aether element, Silicon present in the semiconductor form will be converted into bad conductor due to which all computers and electronic equipments will stop working hence the complete humanity and its life style will be disturbed. At the same time, there will be decentralization of Uranium and other radioactive elements contained in the nuclear weapons resulting in the automatic explosions of nuclear weapons like Atom, Hydrogen bombs etc.

There will be initiation to many natural disasters such as hurricanes, tsunamis, earthquakes, etc. Due to explosion of nuclear weapons, the earth's temperature will be very high due to which the 96 percent ice present on both the poles of earth will start melting and the sea level may rise to 300 to 400 feet due to which all the cities situated on coastal areas may get submerged. The black holes below and above the earth in the sky elements will be destroyed by the Aether energy and the land beyond South Pole will be visible to all and people will come to know that this earth is a flat stationery disc and it is not round. Though, the world transformation seems to be destruction but in reality it is a transition of Iron Age to Golden age. Hence, it is time for all us to realized our true identity as a Soul (i.e. Jiva) and get purified from Unified Filed Consciousness of the universe for upcoming new Golden age of universe.

III. CONCLUSION

In reality we are not this mortal body but a point of metaphysical light energy called Soul (i.e. Jiva) which is very subtle, eternal and programmer of physical body which operate through brain. The consciousness field of Jiva's has been completely affecting the geometric field of the Aether element. If our thoughts are holy then through Aether, nature's 5 elements will be pure and holy. Souls came from the soul world (i.e. Anti-matter world) which is beyond the physical world. There is a Conscious Unified Field of the universe in the 10th dimension with highest Quantum Vacuum Energy (i.e. Aether) level of 10^{21} GeV with Infinite Silence Field of Pure Consciousness. From such Unified Field the entire universe is manifested with the help of 5 elements (i.e. Dravya) of the nature with their particles and force carriers at very high energy levels in the dance of Creation.

This mysterious universe is nothing but Ultimate Sacred Geometry (i.e. Cosmometry) of Conscious Unified Field of universe, from which entire universe is manifested through various patterns of Energy, Frequency and Vibration. As per Fibonacci and Golden ratio, the Aether energy

is manifested through three energetic-synergetic components of energy such as Vector Tensegrity, Torus Flow Process and Field Patterning.

The real structure of the universe is like a Yogi's body who is doing Sadhana, in which the Cosmos is the head and all star celestials are part of Cosmic brain, Pole Star is like hypothalamus, White hole is like crown chakra of universe, all planets are body parts like heart, lungs, liver, stomach etc and Flat Earth is like Yogis legs with Earth's core as Kundalini power of universe in Muladhar chakra. As per ancient Geocentric model of Universe, Earth is a flat and stationary and at the centre of the universe. The complete universe is rotating in a clock wise direction through power from white hole through Pole Star like a net cage on the Flat Earth.

As purity of our consciousness shifts and goes on decreasing, there is a movement of Pole Star towards the earth gradually. Also its centre point will go on changing and now it is inclined at an angle of 23.5° with respect to earth. The gravitational force between white hole and earth is continuously reducing day by day due to which Pole Star is moving which resulted into the sky element is bulging at the centre and hence all the galaxies and stars seem to be expanding.

As per eternal cosmic cycle, it is the call of time for all of us to realize our true identity as a Soul (i.e. Jiva) and get purified from Conscious Unified Field of the universe for upcoming new Golden age of the universe.
